Microsoft PowerPoint Media Use and Student Learning Motivation in Islamic Religious Education

Asep Sulaeman¹
DOI: 10.35445/alishlah.v13i3.1468

Abstract

This study aimed to analyze using Microsoft Powerpoint computer media on students' learning motivation in Islamic Religious Education subjects. The approach used in this study is quantitative. The data used in this study, namely the use of Microsoft Powerpoint media and students' learning motivation in religious education at a private Junior High School in Garut Regency, was analyzed in the form of statistical data. The method used in this research is the descriptive method. Based on the data analysis, it can be concluded as follows: 1) The use of Microsoft Powerpoint media is well proven and reduce verbalism, teaching materials are more transparent in meaning; 2) The more explicit motivation of students is in the excellent, as evidence by excellent results of research on the indicators of being diligent, tenacious, happy to work independently, confident and happy to find and solve problems showing a number 4.09. This figure is in the interval 3.5 – 4.5, including good category; and, 3) The use of Microsoft Powerpoint media on students' motivation to learn is good. It is proven that the study results show that 57% is in a suitable category. As for 43%, it is influenced by other factors.

INTRODUCTION

There are many ways people learn throughout their lives and in every situation. As a human being, education plays a significant role in shaping your character. Education is essential to shaping a person by established norms (Susanti et al., 2020). In light of this fact, the government is taking education extremely seriously, believing that a robust education system will produce the next generation of quality citizens capable of adapting to life in society, nation, and state (Nugraha et al., 2021). Globalization has led to a demand for a new education system that can produce the human resources needed for a rapidly evolving world (Dewi & Izzati, 2020).

Today’s technological advancements have been astounding. Numerous aspects of life have benefited from technological progress. Its existence has profoundly affected human life in various ways and dimensions (Kusruni et al., 2018). Advances in technology and information have also triggered changes in the learning system, namely efforts to free the world of education from the confines of conventional learning models (Irfan & Ristiana, 2019). Learning is a complex process that occurs throughout an individual’s life. The learning process occurs due to an individual’s contact with his environment. As a result, learning can occur anytime and in any location. A change in conduct is one indication that someone has learned. Learning tactics that engage students are student-centred, not teacher-centred (Syapudin & Juhji, 2020). Fun learning can occur if the interpersonal relationship between teachers and students goes well. There are many ways to make the learning atmosphere fun. Fun learning can be achieved because students are active during the learning process (Arshingsih et al., 2021). In addition, interest in learning also contributes to the happy atmosphere of learning. So that interest in learning remains high, teachers need to provide feedback on learning outcomes that have been achieved or tasks that students have completed (Widodo et al., 2021; Prayitno & Mardianto, 2020).

Along with selecting appropriate learning tactics and methods, it can be aided by using relevant learning media to foster student-centred learning, engage students, and foster a pleasant learning environment (Salmihah et al., 2021). The term "learning media" refers to all software and hardware that can be used to communicate the content of teaching materials from learning resources to learners (individuals or groups), stimulating the learners' thoughts, feelings, concerns, and interests in such a way that the learning process (in/out) outside the classroom becomes more effective (Damayanti & Qohar, 2019).

Science and technical advancements increasingly motivate renewal efforts in using technological outcomes in the learning process. Teachers must be able to utilize the tools offered by the school, which may or may not reflect current trends and desires (Anomeisa & Ernainingsih, 2020; Hikmah & Maskar, 2020). At the very least, teachers can employ inexpensive and efficient instruments that, while modest and straightforward, are necessary for achieving learning objectives. Thus, it can be argued that media is an integral part of the teaching and learning process to accomplish educational goals in general and school-based learning objectives in particular (Ningsih, 2020). Human science should be used as a tool to achieve the welfare of all creatures by making the best use of it, one of which is using computer media in learning (Astiti & Saputra, 2021).

Considering that the results of learning Islamic Religious Education have been deemed lacking, the media's presence has a significant meaning in the teaching and learning process. There is a lack of attention paid to other aspects of the learning process, such as the use of teaching methods. Without media that can give students a clearer picture of what they’re learning, it's difficult to meet learning goals. Learning media must be included in teaching and learning because their role as media presenter (message distributor) has unique potentials for motivating students to learn and acting as a teaching aid, and substituting for certain responsibilities of the teacher in the process.

The media can represent what the teacher cannot say through certain words or sentences; even the abstractness of the material can be concreted with the presence of the media. The use of computer media will make it easier for students to receive and remind the material that has been delivered.
Another benefit, it will make it easier for teachers to store material because it can be grown directly to students. A piece of concrete evidence in the form of tools and moving images because these media are directly related to the senses of sight and hearing.

The role of the media is emphasized in the three features of teaching media, namely: 1) Media can capture, store and re-display an object or event; 2) Media can re-display objects or events in various ways according to needs, and 3) Media can display an object or event that contains meaning. It should be noted that information technology has developed very rapidly. Information technology must be realized to create various ways to facilitate information delivery, such as PowerPoint program technology. It is interesting to explain Islamic Religious Education material to students using PowerPoint program learning media in learning. Microsoft PowerPoint is one of Microsoft's applications, and Microsoft Word and Microsoft Excel are well known to many people. These three applications are commonly called Microsoft Office. The Microsoft PowerPoint application serves to assist users in presenting presentations. The PowerPoint tool includes slide capabilities for delivering essential topics of conversation to the pupils. A slide can be animated in an intriguing way using animation capabilities. Similarly, resources such as front images, sound, and effects can create an effective slide. This slide product can entice listeners to accept our kids’ information when it is given. When teachers use computer media, particularly the Microsoft PowerPoint program, they must exercise caution in selecting and identifying the media to motivate pupils to study, as not every student is familiar with it.

The use of PowerPoint as a teaching medium has been studied by a number of researchers in the past. The impact of PowerPoint on student learning was examined by Baker (2018). Mansoer (2019) studied the impact of PowerPoint presentations on student achievement and information retention in English language teaching. PowerPoint presentations were studied by Hadiyanti (2018). This research is different from previous research. It was found that using PowerPoint as a teaching tool in Islamic religious education had a statistically significant impact on student learning motivation.

METHODS

Quantitative methods are employed in this study. Students in Islamic religious education at Muhammadiyah Karangpawitan Junior High School were asked to complete a survey about their motivations for learning through the use of Microsoft Powerpoint computer media. This study employs a descriptive research design (Suriati et al., 2020). Qualitative and quantitative data were collected in this study for the purposes outlined above. This study relies on quantitative and qualitative data rather than relying solely on quantitative information. Students completed a survey that yielded quantitative data, then processed it through statistical analysis. Researchers gathered qualitative data by interviewing, observing, and documenting participants, and then using logical analysis, or rational reasoning and assessment based on the results of the readings, to synthesize the information. Data analysis in this study relies on a quantitative approach that employs normality tests and correlation analysis to examine the relationships between variables.

FINDINGS AND DISCUSSION

Based on the data from the questionnaire distribution, the distribution of the data obtained is as follows:

<table>
<thead>
<tr>
<th>54</th>
<th>56</th>
<th>56</th>
<th>57</th>
<th>58</th>
</tr>
</thead>
<tbody>
<tr>
<td>59</td>
<td>59</td>
<td>59</td>
<td>59</td>
<td>59</td>
</tr>
<tr>
<td>60</td>
<td>60</td>
<td>60</td>
<td>60</td>
<td>60</td>
</tr>
<tr>
<td>61</td>
<td>61</td>
<td>62</td>
<td>62</td>
<td>62</td>
</tr>
<tr>
<td>62</td>
<td>62</td>
<td>62</td>
<td>64</td>
<td>64</td>
</tr>
<tr>
<td>64</td>
<td>64</td>
<td>65</td>
<td>65</td>
<td>65</td>
</tr>
<tr>
<td>67</td>
<td>68</td>
<td>69</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Source: data proceed
Test the Normality of Variable X with the following steps:

Mean: $\bar{X} = \frac{\sum X}{n} = \frac{2025}{33} = 61.36$

Finding the Range of Variable X is the most significant score minus the smallest score, then the range is $R = x_{max} - x_{min}$

$R = 69 - 54 = 15$

The number of Classes is calculated by the following formula:

$k = 3.3 \log n + 1$

$k = 1 + 3.3 \log 33$

$k = 1 + 3.3 (33)$

$k = 1 + 3.3 = 6$ (rounded to 6)

Looking for Class Intervals

$p = \frac{r}{k} = \frac{15}{6} = 2.5$ (rounded to 3)

<table>
<thead>
<tr>
<th>Class Limit</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>54-56</td>
<td>3</td>
</tr>
<tr>
<td>57-59</td>
<td>7</td>
</tr>
<tr>
<td>60-62</td>
<td>13</td>
</tr>
<tr>
<td>63-65</td>
<td>7</td>
</tr>
<tr>
<td>66-69</td>
<td>3</td>
</tr>
<tr>
<td>Amount</td>
<td>33</td>
</tr>
</tbody>
</table>

Based on the table above, the lower class limit and the upper class limit are as follows:

Class lower limit: 54, 57, 60, 63, 66

Class upper limit: 56, 59, 62, 65, 69

High-end Midpoint

- The first class is $\frac{54+56}{2} = 55$
- The second class is $\frac{57+59}{2} = 58$
- The third class is $\frac{60+62}{2} = 61$
- The fourth class is $\frac{63+65}{2} = 64$
- The sixth class is $\frac{66+69}{2} = 67$

The average of the variables X: $\bar{X} = \frac{\sum X}{n} = \frac{2025}{33} = 61.36$

So, the mean median is 61.36. Next, to find the average deviation of the grouped data using the formula:

$$SR = \frac{\sum F_i |X_i - \bar{X}|}{\sum F_i}$$

| Score | Frequency | Xi | Fi Xi | |Xi –\bar{X}||Fi | |Xi –\bar{X}| |
|-------|-----------|----|-------|-------------------|-------------------|
| 54-56 | 3         | 55 | 165   | 6.36              | 19.08             |
| 57-59 | 7         | 56 | 392   | 5.36              | 37.52             |
| 60-62 | 13        | 61 | 793   | 0.36              | 4.68              |
| 63-65 | 7         | 64 | 448   | 2.64              | 18.48             |
| 66-69 | 3         | 67 | 201   | 5.64              | 16.92             |
| Amount| 33        |    | 1999  | 20.36             | 96.68             |

Source: data proceed
Research Variable Correlation Analysis

To find out the strength of the correlation or the high and low correlation. Then, the variable \( x \) "Use of Microsoft PowerPoint Media" and the variable \( y \) "Learning Motivation of Students." So the values, when consulted or compared roughly into the "Product moment" interpretation table, are as follows:

<table>
<thead>
<tr>
<th>Correlation</th>
<th>Conclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; -0.20</td>
<td>slight</td>
</tr>
<tr>
<td>0.21 - -0.40</td>
<td>low</td>
</tr>
<tr>
<td>0.41 - -0.60</td>
<td>moderate</td>
</tr>
<tr>
<td>0.61 - -0.80</td>
<td>high</td>
</tr>
<tr>
<td>0.81 - -1.00</td>
<td>very high</td>
</tr>
</tbody>
</table>

Source: data proceed

1) From the table above, it can be concluded that there is a relationship between the variable \( X \) “Use of Microsoft PowerPoint Media” and the \( Y \) variable, “Student Learning Motivation” because the value of \( r_{xy} = 0.90 \) which lies between 0.70 – 0.90 interpretation is a "very strong correlation". tall.

2) The correlation is very high based on the influence of scientific and technical progress, which encourages reform efforts in using technology results in the learning process.

Determining the test of the effect of the \( X \) variable on the \( Y \) variable

To find out the size of the influence of the variable \( X \) on the \( Y \) variable first, the degree of absence of correlation will be calculated using the formula:

Determining the degree of non-correlation

\[
K = \sqrt{1 - r^2} \\
= \sqrt{1 - 0.90^2} \\
= \sqrt{1 - 0.81} = \sqrt{0.19} = 0.43
\]

Determine the magnitude of the effect of changes in variable \( x \) on variable \( y \)

\[
E = 100 \left(1 - K\right) \\
= 100 \left(1 - 0.43\right) = 57\%
\]

From the calculation above, the degree of change in the \( X \) variable to the \( Y \) variable reaches 57%, which means that there are still 43% of other factors that influence the learning motivation of Muhammadiyah Junior High School students Karangpawitan Garut. This is in line with Baker’s research (2018) that found students learn more when taught the same material using PowerPoint.

Microsoft PowerPoint is a multimedia-based presentation application optimized for delivering presentations, making it an attractive communication medium. Various text, colour, and image processing capabilities, as well as animations that can be treated according to the user’s imagination, are only some of the features that make this medium intriguing to use as a presenting tool. Not always PowerPoint can be used easily by everyone, including in the World of Education. Therefore, below are the obstacles—lack of mastery of Information Technology. Hadiyanti (2018), in her research, state that PowerPoint Presentation is now quite common in many aspects of life, not only at schools. It facilitates although it was occasionally blamed as not engaging or even boring.

Learning methods using learning media and presentation methods lately are often used to implement the learning process because they are considered effective in delivering learning materials. Besides being effective in providing it, it can also increase students' creativity and learning
motivation. The Projector learning media with a PowerPoint presentation program will awaken students' motivation and make it easier to accept and understand the subject matter of Information and Communication Technology learning. One of the factors that influence learning outcomes is the presentation of teaching materials used to influence children's motivation because the production of learning is very important in one's success in learning. In using PowerPoint media, there is an agreement between students about collaborating. Problems solved together will be concluded together. The teacher's role is only as a facilitator who directs students to achieve learning goals. Learning using PowerPoint media can attract students' attention to be active in learning. And can increase student learning motivation. In this case, the improvement happened not only by applying PowerPoint as learning media but also by the activity in learning. It is in line with Tsai (2020), who found that students who received web-mediated Meaningful Learning significantly increased their learning engagement. However, the expected effects of Activity Based Learning on developing students' skills in using PowerPoint and Word, learning engagement, and academic motivation were not found.

CONCLUSION

Based on the data and analysis, it can be concluded as follows: 1) The use of Microsoft PowerPoint media in SMP Muhammadiyah Karangpawitan, Garut Regency is proven to be good and reduces verbalism, teaching materials are more explicit in meaning; 2) Students' learning motivation at SMP Muhammadiyah Karangpawitan, Garut Regency is good, as evidenced by the results of the research on indicators of being diligent, tenacious, confident and happy to take essential wing education: 15:33) = 4.09. This figure is in the PowerPoint interval, including the very good category; and 3) The use of computer media Microsoft PowerPoint on students' motivation to learn book titles is good. Proven research results show that 57% is included in the appropriate category in the Interpretation of the product-moment, while 43% is a PowerPoint influencer factor Determining the degree of non-correlation
