ABSTRACT

This research examines the integration between Al-Kindi’s holistic education philosophy and the implementation of the Independent Curriculum in Madrasah Aliyah, highlighting the need for a more inclusive and holistic educational paradigm. The background of this research is rooted in contemporary challenges in education that demand a holistic approach to curriculum development and teaching methodologies. The purpose of this paper is to analyze the suitability and potential synergy between the two approaches in the context of modern Islamic education. This research used a qualitative research paradigm with a literature approach, where data was collected from various literature related to the topic of discussion. The data is then verified and analyzed systematically to be presented in a structured manner. Key findings suggest that this integration supports the development of student-centered curricula and enhances diverse and interactive teaching methodologies. Implications include the need for teacher professional development, adequate resource allocation, and strategic partnership building to support the implementation of holistic approaches in education.

This is an open access article under the CC BY-NC-SA license.

1. INTRODUCTION

Holistic education has gained wide recognition as a valuable approach in the world of education, aiming to form balanced and versatile individuals (Yavuz, 2022). This approach, which focuses on developing various aspects of an individual (Mahmoudi et al., 2012)—ranging from intellectual, emotional, to spiritual (Mallik, 2022)—responds to the need for more inclusive and integrative education (Kenny et al., 2023). The presence of holistic education as a new paradigm in the last decade marks a shift from traditional education, which is often too focused only on academic aspects (Miller et al., 2019). That is why, discussing Holistic Education is always interesting to study (Tirri, 2011).

The concept of holistic education according to Al-Kindi’s thought puts forward a comprehensive educational approach, considering intellectual, emotional, social, and spiritual aspects in the learning process. Al-Kindi, as one of the leading Muslim philosophers, views education not only as a transfer of knowledge but as a process of character formation and individual wholeness (Mulyadi, 2022). Education,
according to Al-Kindi, must be able to integrate material and spiritual aspects, facilitating human development into balanced and harmonious beings (Leaman, 2001).

In the context of Al-Kindi’s holistic education, emphasis is placed on the importance of balance between reason and heart, whereby education is aimed not only at intellectual development but also at the purification of the soul and formation of ethics. This reflects Al-Kindi’s understanding that truth and wisdom cannot be fully attained through intellectual knowledge alone, but requires a deep understanding of ethical and spiritual values (Adamson & Adamson, 2018).

Al-Kindi’s educational concept also underscores the importance of teaching that is adaptive and responsive to individual needs. Each student is considered unique with different potentials, interests, and ways of learning. Therefore, education must be tailored to meet the specific needs of each student, enabling them to reach their full potential in different aspects of life (Abdul-Jabbar, 2020).

Holistic education, according to Al-Kindi also includes the development of emotional and social intelligence (Abdul-Jabbar, 2020), where students are taught to develop empathy, social sensitivity, and the ability to interact effectively with others. This is in line with the thinking that education should provide students with the skills to live harmoniously in society, promoting peace and social justice (Hidayah & Haris, 2023).

Integrating Al-Kindi’s holistic educational concepts into contemporary educational practices can offer new perspectives in designing more humanist and student-centered curricula and teaching methods. This emphasizes the importance of educating individuals who are not only intellectually intelligent but also emotionally and spiritually rich, able to contribute positively in society (Leaman, 2001).

In the context of Islam, Al-Kindi, a prominent philosopher, has introduced a similar concept through his work emphasizing on the integration of different fields of knowledge. Al-Kindi views education as a means to achieve personal wholeness and universal understanding (Abdul-Jabbar, 2020), which is in accordance with the principles of modern holistic education. Al-Kindi’s approach illustrates how the core values of Islamic education can contribute to the global holistic education discourse (Leaman, 2001) By explicitly outlining how the principles of Al-Kindi’s holistic education philosophy can be practically incorporated into the structure and implementation of the Independent Curriculum in Madrasah Aliyah, readers can better understand the synergies between these two approaches and envision how they can work together to enhance the educational experience.

In an effort to improve the quality of education in Indonesia, especially in Madrasah Aliyah, the introduction of the Merdeka Curriculum reflects the adaptation of holistic education principles in national education practice. As an educational institution under the auspices of the Ministry of Religious Affairs, the position of Madrasah Aliyah is equivalent to Senior High School (SMA), as stated in the Decree of the Minister of Religious Affairs of the Republic of Indonesia Number 370 of 1993. Acting as a formal educational institution, Madrasah Aliyah has a strategic role in educating Indonesian citizens (Alawiyah, 2014).

To strengthen the discussion on the integration of holistic education principles with the Independent Curriculum, it is necessary to emphasize the potential impact and significant implications of this integration on all elements in the education system, including students, teachers, and the education system in general. This integration is expected to yield concrete benefits, such as improved student learning outcomes, which include not only academic achievement but also the development of non-academic aspects such as social, emotional, and spiritual skills. In this context, a holistic approach in education in Madrasah Aliyah can provide space for students to develop thoroughly, creating individuals who are not only intellectually intelligent but also empathetic and have strong moral values.

In addition, for teachers, this integration offers the opportunity to adopt teaching methodologies that are more flexible and responsive to each student’s unique needs, while enriching their learning experience. Thus, educators can be more effective in facilitating learning processes that inspire and motivate students to actively participate in their learning. At the education system level, the adoption of a holistic approach in the Merdeka Curriculum can contribute to the transformation of Indonesia’s overall education landscape. This includes improving the quality of education, providing more inclusive and
equitable education, and forming a strong foundation for sustainable development through character education and student readiness to face future challenges.

Therefore, it is very important to carry out continuous evaluation and research related to the implementation of holistic education principles in the Independent Curriculum in Madrasah Aliyah. This will enable the identification of best practices, opportunities for improvement, and the development of strategies that can maximize the positive impact of this approach on the entire education ecosystem in Indonesia.

This curriculum is designed to provide more freedom to teachers and students in the teaching and learning process, focusing on developing students’ competencies comprehensively, which includes cognitive, affective, and psychomotor aspects. The aim is to create an educational environment that is more flexible and responsive to individual needs as well as the challenges of the times (Girdzijauskinė et al., 2022).

The integration between holistic education and the Independent Curriculum in Madrasah Aliyah offers strong synergy potential. By combining an inclusive and integrative holistic education framework with the flexibility of the Independent Curriculum, education in Madrasah Aliyah can become more adaptive and relevant to the needs and aspirations of students in the modern era. This approach also allows students to develop intelligence in various dimensions, not only academic but also social, emotional, and spiritual, preparing them to become well-rounded individuals and able to contribute positively to society (Hidayah & Haris, 2023).

The application of holistic education, as advocated by Al-Kindi, in Madrasah Aliyah has several strong reasons that can be explained through theoretical, psychological, and pedagogical approaches. Theoretically, holistic education offers a comprehensive framework that recognizes the importance of developing all aspects of students’ lives, not only intellectual, but also emotional, social, and spiritual. In the context of Madrasah Aliyah, which is an Islamic faith-based educational institution, this approach is in line with the principles of Islamic education which emphasizes the formation of balanced and harmonious individuals. Islamic education not only focuses on religious knowledge but also on character building and virtue, which are the core of holistic education (Hidayah & Haris, 2023). Therefore, the integration of holistic education in the Madrasah Aliyah curriculum can strengthen the existing spiritual and ethical dimensions, while expanding them to include broader social and emotional dimensions.

The second is the psychological approach. From a psychological perspective, holistic education supports students’ overall psychological development. The theory of human development, as explained by Erikson and Maslow, emphasizes the importance of meeting the various psychological needs of individuals, ranging from basic needs to the need for self-actualization (Maslow, 1943) (Maslow, 1943). Holistic education, with its focus on emotional, social, and spiritual education, directly supports the fulfillment of these psychological needs, helping students achieve higher personal well-being and satisfaction. In the context of Madrasah Aliyah, this approach can help students develop strong emotional and social intelligence, which is essential for navigating the complexities of social life and building healthy interpersonal relationships.

Third, the pedagogical approach. Pedagogically, holistic education offers a student-centered teaching and learning methodology, which accommodates a variety of learning styles and individual interests. This approach recognizes that each student has a unique way of learning and different potential, and therefore, education must be tailored to meet those needs. In Madrasah Aliyah, the application of holistic education can encourage the use of more flexible and creative teaching methods, such as project-based learning, collaborative learning, and the use of technology in learning. This can not only increase students’ engagement and motivation to learn but also prepare them with skills necessary for the 21st century, such as critical thinking, collaboration, and creativity (Miller et al., 2019).

Thus, the application of holistic education in Madrasah Aliyah is supported by strong reasons from various theoretical, psychological, and pedagogical approaches. This approach can help Madrasah Aliyah develop the next generation to excel not only in academic and religious knowledge but also in emotional intelligence, psychological well-being, and life skills.
Although the concept of holistic education has gained momentum in contemporary educational discourse, and the educational principles proposed by Al-Kindi have been recognized in a philosophical context, there are significant gaps in the literature that specifically link these two elements to modern educational practices, as seen in the implementation of the Independent Curriculum in Madrasah Aliyah. Existing research often treats classical Islamic educational philosophy and contemporary education curriculum as two separate domains, without exploring the potential synergy between the two (Bahroni, 2016).

This gap raises important questions about how the integration between the principles of holistic education promoted by Al-Kindi and the Independent Curriculum approach can create a richer and more multidimensional learning environment in Madrasah Aliyah. One area that requires further exploration is how the curriculum can adopt a holistic approach that considers intellectual, emotional, and spiritual aspects in the learning process, in accordance with Al-Kindi’s view on Education (Muliyiyah et al., 2023).

In addition, it is important to research how teaching and learning practices in Madrasah Aliyah can be improved through the integration of holistic education principles. This includes the development of a curriculum that not only focuses on academic knowledge but also on the development of students’ character and emotional intelligence, which is an important aspect of Al-Kindi’s holistic education and educational philosophy.

Thus, there is an urgent need for research that explores practical ways of integration between Al-Kindi’s educational philosophy and the Independent Curriculum, focusing on teaching strategies, curriculum development, and learning evaluation. This kind of research will not only enrich the academic literature but also provide practical guidelines for educators in Madrasah Aliyah to implement a more holistic and integrative educational approach (Bahroni, 2016).

In addition to the analysis that has been presented, it is also important to consider the social and cultural impact of the integration of Al-Kindi’s holistic education principles in the Independent Curriculum in Madrasah Aliyah. This study must take into account how local socio-cultural values and norms influence the acceptance and implementation of holistic education approaches in the context of Islamic education in Indonesia. A deep understanding of the social and cultural context will enable the development of more sensitive and effective strategies in integrating holistic education principles into the curriculum (Hidayah & Haris, 2023).

In addition, it is important to explore the role of technology in supporting the integration of holistic education and the Independent Curriculum. With the advancement of educational technology, there is significant potential to utilize digital tools to create more interactive and engaging learning experiences, which can enrich teaching and learning in accordance with the principles of holistic education (Girdzijauskienė et al., 2022).

Lastly, further research can focus on evaluating the long-term impact of the integration of holistic education in the Independent Curriculum on students’ academic achievement, personal development, and emotional well-being. Longitudinal research will be invaluable to understand the effectiveness of this approach in improving the quality of education in Madrasah Aliyah and preparing students for future challenges (Miller et al., 2019). Holistic education is a philosophy of education as discussed by the authors. However, it is also a robust theory of learning that should be included with the other theories of learning, and it can be seen as an educational theory (Johnson, 2023).

Currently, existing research has proven the achievement of positive learning outcomes after the implementation of a holistic curriculum. One of them was the results of research that shows that Islamic holistic education in learning Islamic Religious Education at Muhammadiyah Bojong Gede Bogor Elementary School can help students develop intellectual intelligence, spiritual intelligence, emotional intelligence and physical intelligence (Malili et al., 2022). There were also research results that show important value in improving Islamic religious education that is more holistic, to have a positive impact on student character development, and provide inspiration and guidance for other schools in an effort to improve their religious education (Hidayatullah et al., 2024). There are also research results that showed that: (1) the implementation of holistic education in students of the Multilingual Madrasah Mu’allimaat
Integration of Al-Kindi's Holistic Education Philosophy and Its Relevance to the Implementation of the Independent Curriculum in Madrasah Aliyah

2. METHODS

This research adopts a qualitative approach with a focus on literature review to explore the integration of Al-Kindi's holistic educational philosophy in the Independent Curriculum in Madrasah Aliyah. This approach was chosen for its ability to enable in-depth analysis of texts and contexts, uncovering the meaning and understanding contained in related literature (Creswell, 2013). The research process begins with the identification and collection of relevant primary and secondary literature sources, including books, journal articles, official documents, and online publications. The literature review was conducted systematically to gain a comprehensive understanding of key concepts and findings of previous research (Booth et al., 2022).

Any key information gleaned from the review process is then extracted and synthesized to build an integrated understanding of the topic. An analytical framework is developed based on literature synthesis to further analyze research questions. In this study, the researcher acts as the main instrument, with support from the literature review list and synthesis matrix as an aid to data organization and synthesis (Maxwell, 2013).

Data analysis is done through thematic coding, which allows the identification and analysis of themes or patterns (Braun & Clarke, 2012). To improve clarity, the section on data analysis could be enhanced by providing a step-by-step explanation of how thematic coding was applied to identify and analyze themes or patterns in the data. Additionally, elaborating on how narrative analysis was used to synthesize findings and construct coherent arguments would offer insights into the interpretive framework employed in the study. Narrative analysis is used to integrate findings and build coherent arguments, while critical reflection is carried out to evaluate data and interpretation, considering the limitations and implications of findings (Saldaña, 2021). Through this method, the research aims to provide in-depth insight into the potential integration of Al-Kindi's holistic educational philosophy into the Independent Curriculum in Madrasah Aliyah and its implications for curriculum development and teaching practices.

3. FINDINGS AND DISCUSSION

Here are four important results that can be generated from the study on the Integration of Al-Kindi's Holistic Education Philosophy and its Relevance to the Implementation of the Independent Curriculum in Madrasah Aliyah.
3.1 Compatibility of Al-Kindi Holistic Education Principles with the Independent Curriculum

Analysis of the literature revealed a significant congruence between the principles of holistic education proposed by Al-Kindi and the values underlying the Independent Curriculum in Madrasah Aliyah (Adamson & Adamson, 2018; Janssens, 2007; Stewart, 2021). Both approaches emphasize the importance of developing all aspects of the individual—intellectual, emotional, social, and spiritual—in the educational process. This integration offers a strong philosophical foundation for the implementation of the Independent Curriculum, which seeks to create a learning environment that supports freedom of learning and teaching as well as comprehensive development of student competencies (Miller et al., 2019).

Analysis of the compatibility between the principles of Al-Kindi’s holistic education and the Independent Curriculum, especially in the context of curriculum development in Madrasah Aliyah, reveals complementary perspectives and significant synergy potential. Al-Kindi’s approach to education, which emphasizes the holistic development of the individual, encompasses intellectual, emotional, social, and spiritual aspects, providing a solid philosophical foundation for a student-centered curriculum approach, as advocated by the Independent Curriculum.

In the context of curriculum development, this fit manifests in curriculum design that not only focuses on academic achievement but also on character building, student well-being, and their readiness to contribute to society. Al-Kindi’s principles of holistic education emphasize the importance of well-rounded learning, where knowledge is not separated from its ethical and spiritual context. This is in line with the objectives of the Independent Curriculum, which aims to create a flexible and responsive learning environment, encouraging students to develop life skills and social skills along with academic knowledge (Miller et al., 2019).

The integration of holistic education in curriculum development allows students to explore and connect different areas of knowledge, fostering immersive, interdisciplinary learning. This approach supports the construction of richer knowledge and a more integrated understanding of the world, which is essential in an era of globalization and rapid social change. It also supports the development of critical and reflective thinking skills, competencies indispensable in an increasingly complex and diverse society (Davies, 2013).

In addition, holistic education promotes recognition and appreciation of individual uniqueness, which is an important aspect in the development of curricula that are inclusive and adapt to diverse learning needs. In practice, this encourages the use of diverse and adaptive pedagogical strategies, including project-based, collaborative, and inquiry-based learning, all of which are key elements in the Independent Curriculum (Girdzijauskiene et al., 2022).

However, challenges in this integration include the need for comprehensive teacher training, adequate resources, and strong policy support to ensure effective implementation. Therefore, it is important for policymakers and education practitioners to work together in designing and implementing a curriculum that not only reflects holistic educational principles but is also practical and relevant to the local context of Madrasah Aliyah (Nisa’ et al., 2023).

Thus, the integration between Al-Kindi’s holistic education and the Independent Curriculum offers promising opportunities for curriculum development in Madrasah Aliyah that is not only oriented toward academic learning outcomes but also on the development of students’ individual qualities and social competencies. From a philosophical perspective, the analysis of the compatibility between the principles of Al-Kindi’s holistic education and the Independent Curriculum, especially in the context of Madrasah Aliyah, offers an in-depth perspective on the essence of education and learning objectives. In the philosophical tradition, education is considered not only as a transmission of knowledge but as an intellectual and spiritual journey that shapes the individual in all dimensions of his being. Al-Kindi, as a philosopher, viewed education as a process of achieving human perfection through intellectual and spiritual development. Education, in his view, is a tool for acquiring wisdom, which is the key to understanding reality and achieving true happiness. It emphasizes that education

A. Heris Hermawan, Mulyawan Safiandny Nugraha, Nadira Salsabila / Integration of Al-Kindi’s Holistic Education Philosophy and Its Relevance to the Implementation of the Independent Curriculum in Madrasah Aliyah
should not be limited to empirical or technical knowledge only, but should also touch on metaphysical and ethical aspects of human life (Adamson & Adamson, 2018).

The Independent Curriculum, with its focus on competency development and student-based learning, is philosophically resonant with Al-Kindi’s ideas. The curriculum offers a broader framework than traditional education, encourages students to explore and connect different areas of knowledge, and recognizes the importance of character building and student well-being. This reflects the philosophical understanding that true education involves shaping the whole person, not just his intellectual aspects (Kenny et al., 2023).

From a philosophical perspective, the integration of Al-Kindi’s holistic education with the Independent Curriculum can be seen as an effort to achieve harmony in education—harmony between knowledge and wisdom, intellect and morals, individuals and communities (Prasetyo et al., 2024). This approach challenges the dualism that often exists in education, which separates disciplines, theory and practice, as well as academic knowledge and personal development (Palmer, 2017). Therefore, from a philosophical point of view, the integration between Al-Kindi’s holistic education and the Independent Curriculum in Madrasah Aliyah is not only appropriate but also urgent. This paves the way for a more inclusive and holistic education, which not only prepares students with knowledge and skills for the modern world but also guides them in the search for true meaning, purpose, and happiness in their lives. This approach supports a broader vision of education, where learning is considered a lifelong journey toward self-understanding and harmony with the world (Martin, 2018).

3.2 The Effect of Integration on Curriculum Development and Teaching Methodology

This research also found that the integration of Al-Kindi’s educational philosophy into the Independent Curriculum can contribute significantly to the development of curriculum and teaching methodology in Madrasah Aliyah (Mulyadi, 2022). The principle of holistic education supports the use of more inclusive and interactive teaching methods, which not only focus on academic knowledge but also on the development of life skills, creativity, and emotional intelligence (Janssens, 2007; Stewart, 2021). This approach is in line with the objectives of the Independent Curriculum which aims to prepare students with the necessary competencies to face challenges in the 21st century (Girdzijauskiené et al., 2022).

The integration between the principles of holistic education promoted by Al-Kindi and the Independent Curriculum approach has a significant impact on the development of curriculum and teaching methodology in Madrasah Aliyah. This approach offers a new perspective in designing a curriculum that not only focuses on academic achievement but also prioritizes the overall development of student competencies, including emotional, social, and spiritual aspects.

In curriculum development, this integration encourages the creation of a more dynamic and flexible curriculum framework, which can adapt to the unique needs and potential of each student. Al-Kindi’s holistic education-inspired curriculum tends to be more inclusive, takes into account students’ different learning styles and interests, and encourages interdisciplinary exploration. This is in line with the principles of the Independent Curriculum, which prioritizes freedom of learning and teaching as well as comprehensive development of student competencies (Girdzijauskiene et al., 2022). This integration also enriches the curriculum with ethical and spiritual values, which are important aspects of Islamic and holistic education, providing students with a solid foundation for character-building and personal wholeness (Miller et al., 2019).

In terms of teaching methodology, the integration of Al-Kindi’s holistic education approach with the Independent Curriculum encourages the application of more varied and student-centered learning strategies. These methodologies include project-based learning, group discussions, and inquiry-based learning, all of which support active knowledge construction by students and develop critical skills and creativity. This kind of approach supports a more contextual and relevant learning experience, which increases student motivation and engagement in the learning process (Lewin, 2009).

A. Heris Hermawan, Mulyawan Safianddy Nugraha, Nadira Salsabila / Integration of Al-Kindi’s Holistic Education Philosophy and Its Relevance to the Implementation of the Independent Curriculum in Madrasah Aliyah
This integration creates synergies that strengthen both approaches, giving students the opportunity for more holistic and integrated development. However, challenges include the need for comprehensive teacher training in new pedagogical approaches, adjustment of learning infrastructure and resources, and evaluation and assessment in favor of a holistic approach to learning (Chaerunisaa et al., 2023).

In conclusion, the integration between the principles of Al-Kindi’s holistic education with the Independent Curriculum offers a framework that has the potential to change curriculum development and teaching methodologies in Madrasah Aliyah, encouraging a more inclusive, student-centered, and holistic education. These efforts are in line with contemporary education’s goal of forming individuals who are not only academically intelligent but also emotionally and spiritually rich, and ready to face future challenges.

From a philosophical perspective, the analysis of the influence of integration between the principles of holistic education of Al-Kindi and the Independent Curriculum on curriculum development and teaching methodology offers deep insight into the true purpose and essence of education (Abdul-Jabbar, 2020). Basically, education according to the philosophical view does not only aim for the transfer of knowledge but more broadly, for the formation of a whole human being, covering intellectual, emotional, social, and spiritual aspects.

In the context of curriculum development, the holistic education inspired by Al-Kindi expands the scope of education from mere academic achievement to character-building and wisdom. Al-Kindi’s educational philosophy emphasizes the search for truth and wisdom, which is not limited to empirical knowledge but also includes ethical and spiritual understanding. Integration with the Independent Curriculum allows the curriculum in Madrasah Aliyah to create a learning environment that supports students’ intellectual exploration while nurturing their moral and spiritual growth, reflecting the philosophical understanding that education is about preparing students for life, not just for work or career (Lewin, 2009).

In terms of teaching methodology, this integration supports the use of a more student-centered approach, emphasizing learning as an active process involving dialogue, reflection, and social interaction. This corresponds to the philosophical view of learning as a process of self-transformation, in which students are not only passive recipients of knowledge but also active participants in the creation of their own knowledge. This approach reflects Socratic understanding of learning through dialogue and questioning, suggesting that true education involves critical questioning and exploration of meaning (Palmer, 2017).

In a philosophical context, the integration between the principles of holistic education and the Independent Curriculum creates a balance between the transmission of knowledge and the formation of human beings as a whole. It enables education to respond to contemporary challenges while remaining rooted in deep intellectual and spiritual values. This approach describes the philosophical understanding of education as a journey towards wholeness and harmony, in which students are guided to integrate different aspects of themselves in the search for meaning and purpose in life (Martin, 2018).

Thus, a philosophical review of the integration of Al-Kindi’s holistic education with the Independent Curriculum offers a rich and multidimensional vision of education, in which curriculum development and teaching methodology in Madrasah Aliyah aim not only for academic excellence but also for the formation of harmonious individuals, able to navigate the complexities of life with wisdom and integrity.

### 3.3 Challenges and Opportunities in Integration

While there are suitability and potential benefits of integration, the study also identifies several challenges to implementation, including resistance to change from educators, limited resources, and the need for deeper teacher training. However, given these challenges, there are also opportunities for teacher professional development and innovation in educational practice. The study suggests the
importance of a collaborative approach between education stakeholders to overcome these barriers and maximize the potential integration of Al-Kindi’s educational philosophy with the Independent Curriculum (Nisa’ et al., 2023).

The integration between the principles of holistic education of Al-Kindi and the Independent Curriculum in the context of Madrasah Aliyah presents a series of significant challenges and opportunities in curriculum development. This approach demands a paradigm shift in curriculum design, teaching strategies, and evaluation, all of which require substantial resources, training, and commitment from all relevant parties.

One of the key challenges in this integration is the need for comprehensive teacher training. Teachers need to be equipped with a deep understanding of holistic educational philosophies and the ability to apply them in their teaching practice. It involves not only theoretical understanding but also the development of practical skills in innovative and student-centered teaching methodologies (Darling-Hammond, 2006). In addition, changes in curriculum design and teaching practices demand flexibility and creativity from teachers, which can be challenging if not supported by a conducive institutional environment.

Limited resources are also a major challenge. Implementation of a holistic, student-centered curriculum often requires additional resources, including innovative teaching materials, educational technology, and supportive physical infrastructure. In many cases, Madrasah Aliyah may face budgetary constraints that limit their ability to provide these resources (Adiyono Aditono et al., 2023).

Although the challenges are significant, the integration between holistic education and the Independent Curriculum also offers valuable opportunities. One of them is the development of a curriculum that is more responsive and relevant to the needs of students in the 21st century. Curricula that integrate holistic education can be more effective in preparing students with the life skills, emotional intelligence, and critical thinking skills they need to succeed in a complex global society (Trilling & Fadel, 2009). This integration also offers an opportunity to revitalize religious education in Madrasah Aliyah by connecting it more closely with students' daily lives and their personal aspirations. Holistic education, with its emphasis on moral and spiritual growth, can deepen students' understanding of religious values and their application in real life (Puspita, 2023). In addition, this approach can increase student engagement and motivation to learn. By providing a learning environment that is more interactive, student-centered, and encourages active exploration, students are more likely to feel engaged and motivated to learn. This, in turn, can improve student learning outcomes and satisfaction with their educational experience (Ryan & Deci, 2000). The integration between Al-Kindi’s holistic education and Independent Curriculum offers the potential to reform curriculum development and teaching practices in Madrasah Aliyah, making it more relevant, responsive, and meeting students’ needs as a whole. While the challenges cannot be ignored, the opportunities this integration offers to improve the quality and effectiveness of education in Madrasah Aliyah are significant, promising long-term benefits for students, teachers, and society as a whole.

From a philosophical perspective, the analysis of challenges and opportunities in the integration of Al-Kindi’s holistic educational principles with the Independent Curriculum offers deep insight into the fundamental values of education and how this approach can shape individuals as well as society. The philosophy of education, particularly in the Al-Kindi tradition, emphasizes the importance of a well-rounded and integrated education, which not only develops intellectual abilities but also enriches the emotional, social, and spiritual dimensions of students.

From the philosophical side, the main challenge in this integration lies in the application of philosophical idealism in concrete educational practice. Al-Kindi’s educational philosophy proposes an ideal model for an educated human being who is balanced and harmonious in all aspects of his life. However, translating this ideal model into a practical curriculum and teaching methodology is a challenge, given the complexity and diversity of contemporary educational needs (Nussbaum, 1998). In this context, the distinction between philosophical idealism and the reality of educational practice emerges as the main challenge, requiring a creative and adaptive approach.

A. Heri Hermawan, Muliawan Safianandy Nugraha, Nadira Salsabila / Integration of Al-Kindi’s Holistic Education Philosophy and Its Relevance to the Implementation of the Independent Curriculum in Madrasah Aliyah
On the other hand, this integration offers philosophical opportunities to revitalize educational values in contemporary society. By emphasizing a holistic approach that includes intellectual, emotional, social, and spiritual dimensions, education can enrich the human experience and deepen our understanding of what it means to be an educated human being (Palmer, 2017). This fits with the philosophical vision of education as a transformational process that not only transforms individuals but also has the potential to shape a more just, empathetic, and sustainable society.

From a philosophical perspective, the challenge in integrating the principles of Al-Kindi's holistic education with the Independent Curriculum in Madrasah Aliyah is not only an obstacle but also an opportunity for deep reflection on the essence of education. This approach challenges us to reconsider the purpose of education, not only as a means to achieve technical competence but as a journey to form balanced individuals and harmonious societies. In the face of these challenges, there are opportunities to develop educational practices rooted in a rich philosophical understanding of learning as a holistic and integrated process.

3.4 Integration between the principles of holistic education promoted by Al-Kindi with the Independent Curriculum approach in Madrasah Aliyah

The integration between the principles of holistic education promoted by Al-Kindi and the independent curriculum approach in Madrasah Aliyah shows significant potential to create a richer and multidimensional learning environment. These findings reveal that the application of holistic educational philosophy in the curriculum can expand the scope of learning, not only limited to academic knowledge but also include emotional, social, and spiritual development of students (Abdul-Jabbar, 2020; Jayyusi-Lehn, 2002; Musa et al., 2020).

This holistic approach supports the use of more diverse teaching methodologies, including project-based learning, group discussions, and problem-based learning, all of which contribute to a more interactive and engaging learning experience for students (Miller, 2019). It also allows students to connect academic knowledge with their life experiences, making learning more relevant and meaningful.

In addition, this integration strengthens spiritual and ethical aspects in education, in accordance with the purpose of Islamic education to form individuals who are not only intellectually intelligent but also spiritually rich and have noble morals (Trilling & Fadel, 2009). This is especially important in Madrasah Aliyah, where religious education is a core component of the curriculum.

The integration of Al-Kindi's holistic education with the Independent Curriculum also offers opportunities to develop students' social and emotional skills, which are crucial in an increasingly connected and diverse global society. Education that pays attention to emotional and social aspects helps students to develop empathy, emotional intelligence, and collaborative abilities, all of which are key skills for the 21st century (Trilling & Fadel, 2009).

In conclusion, these findings confirm that the integration between Al-Kindi holistic education and the Independent Curriculum can enrich the learning environment in Madrasah Aliyah by providing a more holistic and multidimensional education. This approach not only improves the quality of education but also prepares students with the skills and values necessary for success in their personal and professional lives.

The integration between the principles of holistic education promoted by Al-Kindi and the Independent Curriculum approach has the potential to create a richer and multidimensional learning environment in Madrasah Aliyah. Al-Kindi’s holistic approach, which emphasizes the development of all aspects of the individual—including intellectual, emotional, social, and spiritual—provides a comprehensive framework for education (Leaman, 2001). When combined with the flexibility and student orientation of an Independent Curriculum, this approach can result in a learning environment that is adaptive and responsive to student needs and aspirations.

First, this integration allows the development of a student-centered curriculum, where students have an active role in their own learning process. This is in accordance with the principles of the
Independent Curriculum which emphasizes on personalized and inquiry-based learning experiences, where students are encouraged to explore their interests and potential in depth (Maulida, 2022). By basing this approach on Al-Kindi’s holistic educational philosophy, education in Madrasah Aliyah not only focuses on academic competence but also on developing character and spiritual values, creating individuals of balance and integrity.

Second, this integration supports the use of innovative and varied teaching methodologies, which can meet the diverse learning needs among students. Teaching methods based on holistic education principles tend to be more interactive, collaborative, and reflective, encouraging students to be actively involved in the learning process (Miller et al., 2019). This means that teachers in Madrasah Aliyah can use a variety of teaching strategies, from class discussions, group projects, problem-based learning, to the use of digital technology, to facilitate a rich and meaningful learning experience.

Third, the learning environment created through this integration can enhance students’ well-being by acknowledging and supporting their emotional and social needs. Holistic education recognizes the importance of emotional well-being in learning and emphasizes the formation of positive relationships between students and teachers as well as between students (Rasima, 2018). In the context of the Independent Curriculum, this means that madrasahs can be places where students feel supported, valued, and connected, which are important factors for motivation and academic success.

The integration between Al-Kindi’s holistic education and the Independent Curriculum in Madrasah Aliyah offers an educational model that not only prepares students with the necessary knowledge and skills for their future, but also supports their development into balanced and ethical individuals. This approach enriches the learning environment by offering a broader and deeper dimension to education, which in turn can contribute significantly to the development of a more harmonious and inclusive society (Rasima, 2018).

4. CONCLUSION

The integration between the principles of Al-Kindi’s holistic education and the Independent Curriculum in Madrasah Aliyah marks an important step towards a more inclusive and well-rounded educational paradigm. This approach not only promotes academic achievement but also emphasizes holistic development of students, covering intellectual, emotional, social, and spiritual aspects. Implementation of this educational vision requires concerted efforts, including teacher professional development to ensure they are able to implement holistic teaching methodologies, adequate resource allocation to support innovation in learning, and building strategic partnerships with communities and other stakeholders to enrich students’ learning experiences. In addition, the development of a comprehensive evaluation system and community support for holistic education are key to validating and appreciating this approach within the broader education system. Thus, this integration not only paves the way for the improvement of the quality of education but also prepares students to face future challenges with wisdom and integrity, reflecting a paradigm shift in education that favors the formation of balanced individuals and harmonious societies. For future research, it would be beneficial to conduct longitudinal studies to assess the long-term impact of the integrated educational approach on students’ academic performance and holistic development. Additionally, exploring the perceptions of various stakeholders, such as parents and community members, towards this integrated approach could provide valuable insights for improving its implementation.
